**Comments:** I have a number of concerns with this project including the following - This is a predominately foreign company that has no vested interest in the local environment and will do no more than the bare minimum , they are there to make money not help local people. There would be little to gain and so much to lose for our local residents and the environment. - I have no confidence in their ability to contain the spread of toxic waste both with dust management and flood containment. -This proposal would take huge amounts of water out of an already stressed system damaging the health of the Mitchel River and the Gippsland Lakes. -I am a professional Eel fisherman and there is a huge risk to my livelihood downstream from this project, which is currently a highly productive area. -There is a high risk to the local tourist industries with leakage over time inevitable.
