Comments: Submitting this opposition as a person who has visited this area and wants to protect its natural beauty. Also writing in support of local farmers who we should be supporting not making their lives harder! We've seen too many farmers take their lives and now this? And finally submitting this for the first nations people who hold the proposed land as culturally significant. The sands mine is going to have a terribly negative affect on the environment and those who live and work by the land, it will run off into and contaminate the Mitchell. The Woodglen reservoir is only 3.5 km down wind from the mine and this poses contamination risk for the shire's water supply. Kalbar will require 3bl L of water annually for processing and dust suppression, how is opening this mine after the drought and water restrictions even on the table! Why is big business being being put above the livelihoods of rural folk?! It's 2020, we should be putting people & the environment first.
