Comments: See attached submission

- Kalbar's geochemistry report lists a number of radioactive and cancer-causing substances that will be present in the dust generated. Dust can travel far so this potentially could effect the entire district. The mine is too close to where many families live, farm, work and go to school, it is a highly inappropriate area.
- The \$155M/year Mitchell River Valley vegetable industry that employs up to 2,000 people is as close as 500m downwind from the mine. Will any farmers be able to sell their crops, meat or live stock if their produce is contaminated and they are known to be in a toxic mining area? The answer is most likely a NO.
- The Mitchell River, the source of water to irrigate those vegetables and make ice to transport them is 350m downwind (between the mine and the vegetable fields).
