Comments: Dear Inquiry and Advisory Committee members, I am writing in response to the EES conducted by Kalbar for the Fingerboards Mineral Sands Mine Project. As a young person who lived in East Gippsland for 3 years, I am extremely concerned about the negative effects the Fingerboards Mineral Sands Mine will have on the region. As Kalbar's geochemistry report states, there are a number of cancer-causing, radioactive substance that will be present in the dust generated. Given that the mine is as close a 500m to the Mitchell River Valley vegetable industry, the potential for contamination as a result of this toxic dust is far too high. If such contamination was to occur the 2000 people that the industry employs may find themselves out of work and the \$155m/year these farms create would be lost. This would be devastating to the region and those who live and work within it. Further, this toxic dust could have extremely harmful effects on the health of East Gippslanders and to risk this would be highly inappropriate. The potential for damage and contamination of the Heritage listed Mitchell River and the world-renowned Gippsland Lakes is also of concern. These bodies of water are a huge tourist attraction and if they are polluted the effects on tourism in the region could be devastating. Irrigation data shows that if the 3 billion litres of water Kalbar would require annually was redirected to growing vegetables, 3 times more jobs would be created than Kalbar's proposal. These jobs, according to National Farmers Federation would all lead to an additional 4.2 indirect jobs. The potential consequences this project may have, as outlined above, far outweigh any benefits it could bring. I hope you will listen to the people of East Gippsland and advise that the project be scrapped. Additionally, as a young individual, it feels as though this will be something to affect our generation immensely for years to come, long after the people in charge of this have caused irreversible damage, profited and then left. Thank you for the opportunity to make this submission. Yours sincerely, Georgia Quirke

Dear Inquiry and Advisory Committee members,

I am writing in response to the EES conducted by Kalbar for the Fingerboards Mineral Sands Mine Project. As a young person who lived in East Gippsland for 3 years, I am extremely concerned about the negative effects the Fingerboards Mineral Sands Mine will have on the region.

As Kalbar's geochemistry report states, there are a number of cancer-causing, radioactive substance that will be present in the dust generated. Given that the mine is as close a 500m to the Mitchell River Valley vegetable industry, the potential for contamination as a result of this toxic dust is far too high. If such contamination was to occur the 2000 people that the industry employs may find themselves out of work and the \$155m/year these farms create would be lost. This would be devastating to the region and those who live and work within it.

Further, this toxic dust could have extremely harmful effects on the health of East Gippslanders and to risk this would be highly inappropriate.

The potential for damage and contamination of the Heritage listed Mitchell River and the world-renowned Gippsland Lakes is also of concern. These bodies of water are a huge tourist attraction and if they are polluted the effects on tourism in the region could be devastating.

Irrigation data shows that if the 3 billion litres of water Kalbar would require annually was redirected to growing vegetables, 3 times more jobs would be created than Kalbar's proposal. These jobs, according to National Farmers Federation would all lead to an additional 4.2 indirect jobs.

The potential consequences this project may have, as outlined above, far outweigh any benefits it could bring. I hope you will listen to the people of East Gippsland and advise that the project be scrapped.

Additionally, as a young individual, it feels as though this will be something to affect our generation immensely for years to come, long after the people in charge of this have caused irreversible damage, profited and then left.

Thank you for the opportunity to make this submission.

Yours sincerely,
Georgia Quirke
