**Attachment 3:**

**Comments:** No one here wants this mine, farmers can't get enough water to grow the food we all eat and you want to give these [REDACTED] 3 billion litres a year out of the river they need to irrigate the crops. They're gonna be wasting our towns water to try and suppress the toxic dust their mine produces but the dust is obviously going to contaminate the river only 500m away that the area depends on. And on top of that they want to ship the 8mt of minerals they get overseas so no one over here benefits except a big company that has no connection to the area and only wants to make money with complete disregard to the damage they cause. Our waters going to be [REDACTED] if this happens, if theres even enough water for the farmers to grow the food the waters going to be contaminated if the mine goes ahead, contaminated water = contaminated food = you die. No one here wants this mine, you can create jobs without [REDACTED] our water supply so dont use that excuse to justify their [REDACTED]. [REDACTED] Kalbar and [REDACTED] you [REDACTED] if you let this happen.
