**Comments:** Please stop kalbar and protect our local vegetable farmers. The fertile River flats have supported our community and most of Victoria with high quality vegetables for generations. The adverse effect of the mine on the Mitchell River will irrevocably change the eco system of the flats and in doing so will damage our irriplaceable food bowl. The subject of the proposed mine has caused me much distress as it has many other members of the community knowing the negative impacts this mine will cause to the precious enviroment.
