Dear Inquiry and Advisory Committee members,
I am writing this submission about
EES (Environment Effects Statement) for
the Fingerboards mineral sands mine project
which I strongly oppose because of the
potential impacts of the mine proposed.

1. Environmentally it would be a complete disaster for the food bowl along the Mitchell River flats, on windy days. There is no way to protect the huge area.
2. Heavy vehicle traffic which will be constant & damaging not to mention the noise factor along the Lindenow Glenaladale Road where my family lives. I would like to know where the raw material is transported to & how many heavy vehicles will travel up & down that road every day?
3. Mining has always had health risk, with very little consideration for the population who have settled in this peaceful environment well before the mine site was considered. Why trust the mines after what Rio Tinto did?

Yours Sincerely Lynette Walker
