Dear Amy,

The summary of submissions that Kalbar prepared in response to Direction 26 is incomplete and should include the following:

**2.3 Groundwater**

Issue 2 (page 21 ...groundwater dependent ecosystems): My submission, #691, should be included. See #691 page 3, last paragraph.

**2.4 Water catchment**

Issue 4 (page 23, Concern with the catchment dams):

Dispersive soils, typical of the proposed mine site, are inappropriate for constructing large dam walls. See #691 page 1 issue 1. They are also the underlying reason why tunnel erosion is such a major issue within the Glenaladale/ proposed mine site area (#691 page 1 issue 1, and elsewhere in #691).

This is an important issue that deserves being included as a separate Issue number, (preferably), or at least as a dot point within Issue 4.

Kind regards,

Harry (Harold) Coleman
