Attachment 3:

Comments: The possible environmental risks associated With this project and it's proximity to food and tourism assets, far outweigh the possible economic benefit and for East Gippsland & East Gippslanders. Tourism, agriculture & food production and our Lakes are a long term industries and attractions with massive, sustainable economic benefit. There is more to be gained by many more East Gippslanders through agriculture and tourism than via a short term, narrow benefit mine with far reaching environmental risk. No risk is too small to ignore when there are so many factors unknown, unpredictable and outside of human control.
