Comments: I do not want this mine planning to go ahead. I have family and friends that work, live and belong to this region, and it will destroy their way of living and their peace. The valleys food bowl is in grave possibility of contamination, or soilage, let alone the countless megalitres of water required to run this facility. This part of east gippy is my favorite in the region, and a consistent holiday destination for my family. It does not need or want an eyesore, a polluting waste of resource in its region. If the true aim of the company is to bring jobs and prosperity to the region, actively invest in the regions existing capabilities and strengths. Every job in Agriculture leads to more active and indirect jobs than mining as a whole, let alone the positive outcomes to family and the earth. Decline this submission, and set the standard for what we want this country to be used for. Say no to Kalbar.
