Comments: I have lived in mining towns and had my house covered in soot. You only need to visit others areas where there's mine to see the destruction it causes to the environment around it. I moved here for the beauty of the lakes it would only take a small mistake and our beautiful lakes system will be badly damaged taking hundreds of years to recover. If people don't like wearing mask now wait until the next drought and we will al be wearing them just so we can breathe from the dust this will cause. Australia needs to look back into small manufacturing than supporting a mine where the money will go offshore. I don't want the mine here of live in an area mining town it will break my heart to this beautiful place Destroyed
